Technical Analysis Module

Description

The Technical Analysis training module is a research based program offered at IBBM, envisioned to impart knowledge and skills to be a successful investor, trader, analyst or advisor in the financial markets. This module is a professional & detailed training program in technical analysis for traders as well as the investors. In finance, technical analysis is a security analysis discipline for projecting price direction through the study of past market data, primarily price and volume. It is the only tool for anticipating stock, commodity and currency (FOREX) market movement for intraday & delivery trades.

Highlights

- This module provides the methods for identifying market trends, historically relevant price patterns and behaviors to help forecast potential direction of the stock turning points in the market.
- Technical Analysis program offers logic based study where participants will learn through candlestick, their formation, various candlestick patterns, technical indicators, relevant market theories, and much more. Just for your knowledge, candlestick patterns date back to Japanese merchants eager to detect trading patterns for their rice harvests.
- After the completion of this program, participants will be able to evaluate market data and predict future market trends.
- Enhances the knowledge base and develops the market understanding in depth which will enable you to have more winning trades by simultaneously managing risks and cutting losses.
